7.	All the vacant land in Tashkent was classified into two groups: "plan housing" and "not planned for housing". Usually just the terms "planne" not planned" were used in conversation. Land that was "planned" coul for the construction of private housing, and the "not planned" land wa to be used for schools, roads, factories, or other public buildings. on whether a certain piece of land was "planned" or "not planned" was to everybody at an office (name and location unkown) in Tashkent. Lan purchased from Uzbeks who owned a considerable amount of land. Worke industrial plant could buy land that had been assigned to the plant fo housing, if they could prove that their living quarters were too small needs and that nothing else suitable was available. Industrial plants sell land to their workers unless it was "planned" land. Uzbeks, howe sell their land regardless of which category it was in.	d be used s intended Information available d could be rs in an r private for their
8.	Persons who owned "not planned" land and want d to build a house on it get a building permit and therefore had great difficulty in obtaining materials. If there was an abundant supply of building materials avail however, brick plants or lumber rards would sell bricks or lumber even persons who had no building permit. If a private house was built on "planned" land, the Soviet Government could at any time confiscate the down the house in order to build a street, school, etc. In spite of t and risks, houses were still being constructed on "not planned" land.	building lable, to not land and tear

5. Each house cost about 25,000 rubles, excluding the installation of plumbing, water, and electricity, which were not available in this section of Tashkent, and the veranda, which was not included in the basic house plan but added by the builders

50X1-HUM 50X1-HUM

Before 1958 these houses could have been sold by the builders for 50,000-70,000 rubles each, but since 1958 all contracts leasing land for private house construction have had a clause prohibiting the sale of the house to a third person.

6. An itemized listing of the cost of each of these houses is given below.

:	Item	Rubles
a.	Bricks (40,000)	4,400
bo	Setting of bricks	4,000
c.	Foundation	4,000
đ.	Lumber	600
8.	Carpentry	<b>1</b> ,500
f.	Paint, nails, screws, etc.	1,000
g.	Plastering and whitewashing	3,000
h.	Roof	3,000
1.	Doors, windows, stoves, oven	3,500
	TOTAL	25,000

Item a: The bricks were sunbaked at the construction site by Uzbeks especially trained for this work. The bricks were of good quality and could be expected to last 50-60 years; they cost 110 rubles per thousand.

Item b: sum for building the walls. 50X1-HUM

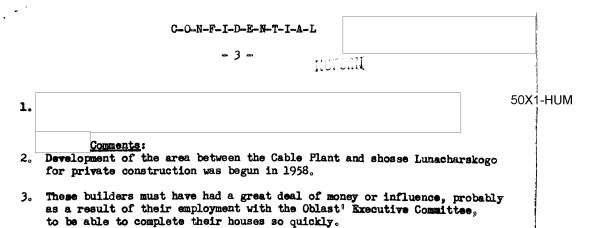

- Item c: This sum included the purchase of the cement and gravel used in the foundation and the laying of the foundation.
- Item d: The lumber was used for the floor, ceiling, and roof foundation.

  It was bought from the Oblast Executive Committee; had it been bought on the black market the price would have been many times this amount, because lumber was a critically short item in Tashkent.
- Item e: This was the total charge for all carpentry work on the house.
- Item f: All these items were purchasable in regular stores in Tashkento
- Item g: This price covered the cost of the materials and the amount to do the work.

50X1-HUM

- Item h: This was the cost of the slate (shifer) used for the roof; the cost was 15 rubles per piece of slate. If the roof had been made of timplate the cost would have been less.
- Item i: The builder got these items from the Committee; if he had had to buy them on the black market they would have cost much more. Each window had a wooden frame and two inside and two outside panels; the price of a complete window was 450 rubles. Two coal-burning stoves provided the only heating for the house.
